

# Scoping problem with strict mode

---

file1.js

```
"use strict";
```

```
let doSomething = function() {  
    // strict mode applies  
}
```

---

file2.js

```
let doSomethingElse = function() {  
    // strict mode applies too  
}
```

# Solution 1 : encapsulate Javascript in **a closure**

```
(function() {  
    "use strict";  
  
    let private = function() {  
        // private is not available from outside  
    }  
} ());
```
