

Securing the web architecture means securing ...

entertainment

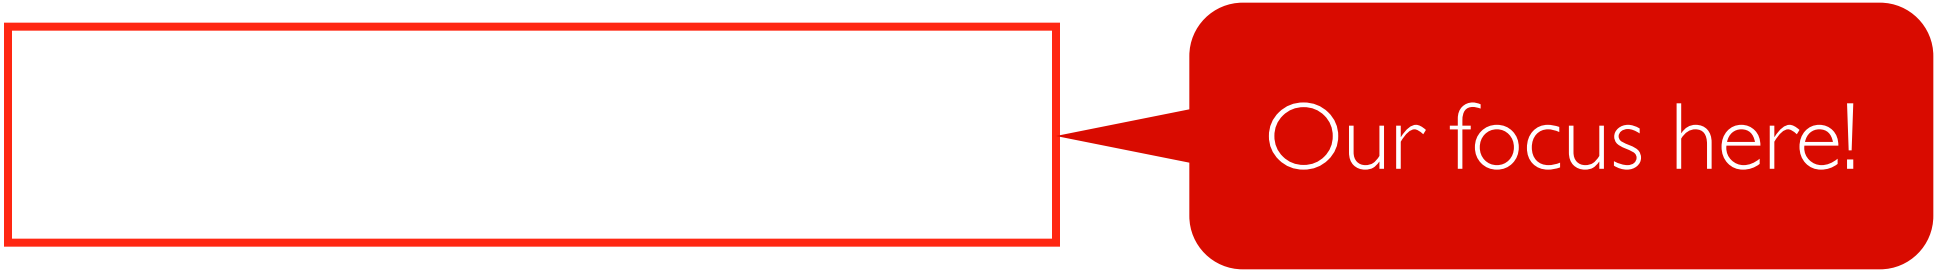

• The operating system

- Thewebserver(Appache for instance)

- The administration server (SSH for instance)

- The database (Oracle/Informatica)

• The new web application

Our focus here!

Securing the web architecture means securing ...

- The network
- The operating system
- The web server (*Apache* for instance)
- The administration server (*SSH* for instance)
- The database (*Oracle* for instance)
- The web application

Our focus here!

Facebook closes hole that let spammers auto-post to walls, friends

Social-networking site plugs a second hole that allowed spammers to automatically post to people's pages.
