

[new way] Javascript Modules (new in es6)

- ➡ provides encapsulation and namespace by default
- ➡ load the code asynchronously and defer execution by default

index.html

```
<script type="module" src="file1.mjs">
```

file1.mjs

```
export doSomething = ...
```

file2.mjs

```
import { doSomething } from "/file1.mjs"
```

Structuring the Frontend
