

## [digression] relaxing the same-origin policy

- Switch to the superdomain with javascript  
`www.example.com` can be relaxed to `example.com`
- iframe
- JSONP
- Cross-Origin Resource Sharing (CORS)

# Problem

- ➡ An attacker can executes unwanted but yet authenticated actions on a web application by either
  - setting up a malicious website with cross-origin requests
  - or by injecting malicious urls into the page
