

## [old way] Scoping problem with variable names

---

```
file1.js  
let doSomething = function() {  
    // first declaration of doSomething  
}
```

---

```
file2.js  
let doSomething = function() {  
    // conflicting doSomething from file 1  
}
```

## [old way] Scoping problem with strict mode

-----  
file1.js

```
"use strict";
```

```
let doSomething = function() {  
    // strict mode applies  
}
```

-----  
file2.js

```
let doSomethingElse = function() {  
    // strict mode applies too  
}
```
