

Constants and Variables - var vs let

```
var name = "Alice";  
var age = 28;
```

old way
(should not be used)

```
let name = "Alice";  
let age = 28;
```

new since es6

```
const name = "Alice";  
const age = 28;
```

IF statement

```
if ( (age<20 && name="Alice") || (age>=20) ) {  
    age = age + 1;  
}  
else{  
    name = "Alice " + "Alicson";  
}
```

else statement is optional

Look at the operator switch as well
