

Great technology ... but nobody uses it!

Google is planning to remove the push feature from Chrome!

"Almost five and a half years after the publication of the HTTP/2 RFC, server push is still extremely rarely used. Over the past 28 days, 99.95% of HTTP/2 connections created by Chrome never received a pushed stream, and 99.97% of connections never received a pushed stream that got matched with a request. These numbers are exactly the same as in June 2019"
