

Defining a promise

```
var readFile = function(filepath){  
  return new Promise(function(resolve, reject){  
    fs.readFile(filepath, 'utf8', function (err, data) {  
      if (err) reject(err);  
      return resolve(data);  
    });  
  });  
}
```

Calling a promise

```
readFile(filepath)
  .then(function(data){
    console.log(data);
  })
  .catch(function(err){
    console.log(data);
  });
```
