

# Differences between XHTML and HTML

At first, browsers were quite forgiving about missing/mismatched tags in HTML

- Different rendering across browsers

HTML became XHTML (aka HTML 4 and 5)

- ✓ Homogeneity across browsers (for the most part)

- ✓ Easier to parse in Javascript

# Validate your (X)HTML

Check out W3C Markup Validation Service:

<http://validator.w3.org/>

Or HTML Tidy (command line tool):

<http://www.html-tidy.org/>
