

Example

```
<html>
<body>
<script type="text/javascript">
    document.body.innerHTML = "<h1>This is a heading</h1>";
</script>
</body>
</html>
```

Javascript: Inline, embedded or separate file?

Inline

```
<button onclick="console.log('Hello World!');">Click me</button>
```

Embedded

```
<script type="text/javascript">  
    console.log("Hello World!");  
</script>
```

Separate file

```
<script src="js/script.js"></script>
```
