Solution I: using strict mode

- → Force the browser to validate Javascript against the standard
- ✓ Dynamically raises errors (or warnings) in the console when the code is not compliant with the standard

```
"use strict";
let doSomething = function() {
    // this runs in strict mode
}
```

Solution 2 : using JSHint

- → Analyze Javascript source code with JSHint
- ✓ Statically finds bugs and reports them in the terminal
 - \$ npm install -g jshint
 - \$ jshint myScript.js
