Problem with scoping

- → In the browser, all Javascript files share the same execution environment i.e they share the same scope
 - variable (and function) naming conflicts
 - strict mode applied to all

Scoping problem with variable names

```
file1.js
let doSomething = function() {
    // first declaration of doSomething
                                      file2.js
let doSomething = function() {
    // conflicting doSomething from file 1
```
