Associative Arrays (aka Hashtables or Dictionaries)

```
const myDict = new Object();
myDict["first"] = "JavaScript";
myDict["second"] = "is";
myDict["third"] = "fun";
const myDict = {};
myDict.first = "JavaScript";
myDict.second = "is";
myDict.third = "fun";
const myDict = {first: "Javascript",
               second: "is",
               third: "fun"}
```

Iterate through associative arrays

```
const person = {
   fname: "Alice",
   lname: "Alicson",
   age: 30
};
for (let k in person) { . . . }
for (let k of Object.keys(person)) { ... }
for (let v of Object.values(person)) { ... }
for (const [k, v] of Object.entries(person)) { ...}
```
