First-class functions

```
function getAge() {
    return 28;
getAge();
or
const getAge = function() {
    return 28;
};
getAge();
or
const getAge = () \Rightarrow 28;
getAge();
```

Anonymous functions will be very useful for object methods and callback methods

Prototype-Based Object-Oriented

```
// defining a constructor
function Person(name) {
    this.name = name;
// adding a method
Person.prototype.getName = function() {
   return (this.name);
};
// creating an object
const p = new Person('Mariam');
console.log(p.getName());
console.log(p.constructor.name);
console.log(p instanceof Person);
```
