Defining a promise

```
const readFile = function(filepath){
 return new Promise(function(resolve, reject){
     fs.readFile(filepath, 'utf8', function (err, data) {
         if (err) return reject(err);
         return resolve(data);
     });
});
```

Calling a promise

```
readFile(filepath)
 .then(function(data){
     console.log(data);
 })
 .catch(function(err){
     console.log(data);
 });
```
