Why do we need Ajax?

So far, when we wanted to

- send data to the server
- or retrieve data from the server
- we had to refresh the entire page
 (i.e reloading HTML, CSS, JS and all media files)
- ✓ But, why not using Javascript to process the data and perform the necessary page changes?

Ajax - Asynchronous Javascript And XML

Fetch/push content from/to the server asynchronously i.e without having to refresh the page

- Ajax is not a language
- √ It is a simple Javascript command
