## Routing HTTP requests

Process HTTP requests and execute different actions based on

- the request method
- the url path
- whether the user is authenticated
- ect ...
- A router can be written from scratch (but it is tedious)
- Use the backend framework Express.js

## Express.js - HTTP Methods

src/express-examples/0 I\_httpmethods.js

```
const express = require('express')
const app = express();
// curl localhost:3000/
app.get('/', function (req, res, next) {
    res.end("Hello Get!");
});
// curl -X POST localhost:3000/
app.post('/', function (req, res, next) {
    res.end("Hello Post!");
});
const http = require('http');
const PORT = 3000;
http.createServer(app).listen(PORT, function (err) {
    if (err) console.log(err);
    else console.log("HTTP server on http://localhost:%s", PORT);
});
```
