How to store and verify password?

- Clear

- Encrypted

- Hash

- Salted Hash

Salt and hash must be stored

Data can be hacked

A key is needed to store and verify passwords

Weak passwords have known hash

How to store and verify password?

- ~~Clear~~ ← Data can be hacked

- ~~Encrypted~~ ← A key is needed to store and verify passwords

- ~~Hash~~ ← Weak passwords have known hash

- Salted Hash ← Salt and hash must be stored

Basic Authentication (stateless)

(Standard) RFC 2617

➡ Login and password are sent in **clear** (Base64 encoding) in **the headers** `authorization`

```
$ curl -u login:password http://url
$ curl http://admin:password@url
```
