Selection of tags

`<h1> <h2> <h3>`	headers (<h1> is the biggest by convention)
`<p>`	delimitates a paragraph
`<img>`	image
`<a>`	specifies an anchor (typically an hyperlink)
`<ul>`	unordered list
`<li>`	list item
`<div>`	delimitates a block
`<span>`	group in-line document (use mainly for style)

Differences between XHTML and HTML

At first, browsers were quite forgiving about missing/mismatched tags in HTML

⊙ Different rendering across browsers

HTML became XHTML (aka HTML 4 and 5)

✓ Homogeneity across browsers (for the most part)

✓ Easier to parse in Javascript
